## Summary

I am a self-taught web developer seeking my first position in the technology sector. I have always been one to take on challenges, seek solutions, and gain knowledge in the process. Spending most of my professional career in hospitality management taught me countless lessons in conflict resolution, team training, and client satisfaction. My goal is to join an organization as a junior web developer and continue to learn by building practical applications for clients all over the world.

## Experience

### WEB DEVELOPMENT | INDEPENDENT STUDY | 2020-PRESENT

Through peer lead course work from various resources such as W3 schools, Digital Defynd, and Udemy, have made me familiar with MERN Stack Development and JavaScript libraries. Building responsive sites and simple web applications have given me the ability to consume API's for displaying information in real time, creating schemas for building data structure in MongoDB, and how CRUD operations are used for data storage and retrieval.

### SERVICE INDUSTRY | VARIOUS ROLES | 2006-2020

Over the course of an extensive career in food and beverage has strengthened my customer service skills, ability for team management, and effective sales tactics. As management, some of my responsibilities included handling financials, menu creation and costing, forecasting business for proper ordering of goods, writing schedules, and continuous product knowledge training for myself and my staff. Managing a restaurant requires the ability to multitask, think critically, and resolve issues quickly to continue a smooth service. For full details about roles and responsibilities, please visit my [LinkedIn](#) portfolio.

## Education

**ASSOCIATES OF ARTS – PHOTOGRAPHIC, FILM, AND VIDEO TECHNOLOGY | YAVAPIA COLLEGE, SEDONA, ARIZONA**

**HIGH SCHOOL DIPLOMA | JOHN MARSHALL HIGH SCHOOL, SAN ANTONIO, TEXAS**
